Subject: Call from Cynthia Draper
Date: Friday, November 15, 2013 3:51:12 PM

FYI- I just wanted to let you know that Cynthia Draper from AMEC called me to follow up on the correction to the fish tissue PRGs. They had taken the human health PRGs from an ARCADIS figure rather than going back to the CDM HHRA, and apparently misinterpreted the sediment PRGs as fish tissue PRGs. She was apologetic because the FS and recent fish tissue trend work had gone through numerous QC checks and nobody caught it. I told her that it was caught in time because they still have time to go back and revise the trend plots and estimates of time to achieve RAOs before the meeting next week.

Have a good weekend,

Patty
